Global Storage Management

Key Features

20 years of experience and thousands of installations in network wide and cross platform IT-environments in more than 40 countries.

- Disaster Recovery on dissimilar hardware for Microsoft Windows Small Business Server - Standard and Premium Editions (SEP sesam Bare System Recovery)
- Fully supports Microsoft Virtual Shadow Copy Service to provide consistent backups.
- Scheduled integrity checks of backup media guarantees restores of archived backups.
- One management interface for central administration via LAN/WAN.
- Hot/Online backups and restores for Microsoft Exchange, Share Point Services and Microsoft SQL environments.
- Microsoft Exchange single email restore
- Continuous backup protection for desktops and laptops supporting Wake-on-LAN backups.
- Open file backup management guarantees consistent backups.
- Free installation support.
- Dedicated backup server for superior data security.
- Fully scalable with all SEP sesam modules for hot/online backup & restore, backup of virtual environments, backup clients and lots more.
- Enhanced Virtual Tape Library (VTL) support.
- All backup media, drives and loaders are supported

SEP sesam Hot/Online Mail-Groupware Module for Microsoft Exchange SBS

SEP sesam Hot/Online Microsoft Exchange Module performs restores of individual emails while the database is online. Recovering a lost server even to an alternate location is a basic feature. Database portability allows an Exchange 2010 mailbox database to be moved to and mounted on any other Exchange 2010 Mailbox server in the same organization. This reduces the overall recovery times for various failure scenarios. All Microsoft Outlook components can simply be restored for every work station. Hot/Online backups and recoveries of Microsoft DAGs (Data Availability Groups) are supported to allow maximum data protection in large Microsoft Exchange Server environments.

SEP sesam Hot/Online Database Module for Microsoft Share Point Server SBS

Microsoft Share Point Services are continuously protected by the SEP sesam Hot/Online Database Module for Share Point Server. This module can be deployed to backup a single server as well as a multi server farm and restore the data also to a different server or farm within seconds. Individual documents, items or sites are restored on Microsoft Share Point without affecting the state of the server farm.
